

Multiphase active ingredient-containing formulations

5 Abstract

A solid or semisolid, at least two-phase active
ingredient-containing formulation in which there is
multiparticulate incorporation of one of the two phases into a
10 matrix of the other phase, and at least one of the phases
contains at least one active ingredient, obtainable by
introducing particles of one phase into the other phase in a
plastic state, and shaping the material while still plastic.
